#### **ELECTRICAL SAFETY TESTERS**

The Electrical Appliance & Material Safety Low (Japan), UL (U.S.A.), CSA (Canada), VDE (Germany) and BS (U.K) are some major examples of safety standards in use throughout the world that require the performing of withstanding voltage testing. For this reason, it is necessary to confirm for what portion of what standard testing is to be performed when purchasing a withstanding voltage tester. Although the 500 VA capacity withstanding voltage testers available from KIKUSUI can basically be applied to tests specified in all safety standards, we recommend that you consult with us prior to purchase in order to select the model that best matches your specific application.

# CONTENTS

WITHSTANDING VOLTAGE AND INSULATION
RESISTANCE TESTER / TOS9200 SERIES

WITHSTANDING VOLTAGE AND INSULATION
RESISTANCE TESTER / TOS8870A

P17 to 19

WITHSTANDING VOLTAGE TESTER / TOS5000 SERIES

P20 to 23

WITHSTANDING VOLTAGE TESTER / TOS5000A SERIES P24 to 26

WITHSTANDING VOLTAGE TESTER / TOS5052 P27 to 28

INSULATION RESISTANCE TESTER / TOS7200 P29 to 31

EARTH CONTINUITY TESTER / TOS6210 P32 to 34

RTH CONTINUITY TESTER / TOS6200 P35 to 37

OPTION P38 to 39

## NOTE: Marking

Products equipped with these interfaces as standard.

Products adapted to either VisualBasic, LabVIEW and LabWindows / CVI.

Refer to the down load service for drivers at Kikusui Web site.

Withstanding Voltage and Insulation Resistance Tester

# Perfect design for System Operation, introducing our top of the line of Withstanding Voltage / Insulation Resistance Testers

# TOS9201(AC/DC) TOS9200(AC)

#### Material Safety Law (Japan)

The TOS9200 Series has been developed to meet a wide diversity of customer needs. Including the refinement and enforcement of Kikusui's former series, its specifications reflect the results of detailed study of our large database of user's requirements including special orders and modifying specifications.

The TOS9200 Series consists of four products the testers TOS9200 and TOS9201, and the high-voltage scanners TOS9221 and TOS9220.

The TOS9200 is equipped with AC withstanding voltage and insulation resistance testing functions, while the TOS9201 has a DC withstanding voltage testing function in addition to these two functions. The power block, a core component, employs a high-efficiency switching power supply and a switching amplifier based on PWM systems. These features realize high power and enhanced stability, as well as reducing the size and weight of the unit. When combined with the earth continuity tester TOS6200, the TOS9200 Series integrates three or four types of tests in a single process.

Furthermore, when used together with the high-voltage scanner TOS9220/9221 (equipped with a contact check function), the tester is capable of automatically checking test points for up to 16 channels, thereby facilitating a safe, reliable automatic testing system.

- Rise-time control function
- Fall-time control function
- Offset cancel function
- Measured-value hold function
- Output voltage monitoring function
- Memory function
- Program function
- Interlock Function
- DC Discharge Function

#### **Basic performance**

# Three functions - AC withstanding voltage testing, DC withstanding voltage testing and insulation resistance testing

The TOS9200 can perform AC withstanding voltage tests and insulation resistance tests, while the TOS9201 can also conduct DC withstanding tests. Once connected to a device being tested, the TOS9201 executes an AC withstanding voltage test, DC withstanding voltage test, and insulation resistance testing in succession in one process.

#### AC withstanding voltage testing at 5 kV and 100 mA

Equipped with a high-efficiency switching power supply in its high-voltage power block, a PWM-based switching amplifier and a 500 VA high-voltage transformer, the TOS9200/TOS9201 realizes a maximum output of 5 kV/100 mA (continuous output for 30 minutes), or 2.5 times the output of Kikusui's former models. At a test voltage of 500 V or more and an upper current of 100 mA, or greater the tester instantaneously satisfies the requirements of a short-circuit current of 200 mA or more which is required by the IEC standard \*. In addition, the tester ensures a load effects of 30% or less and the generation of a consistent 50 Hz/60 Hz test voltage free from the affect of the supply voltage. These features eliminate the need to readjust the output voltage once the test voltage is preset.

\*Continuous outputs are impossible because the output is cut off if an overcurrent is detected.

# DC withstanding voltage testing at 6 kV and a maximum output of 50 W $\,$

The TOS9201 permits DC withstanding voltage testing at up to 6 kV \*. The tester is equipped with a stable, low-ripple DC/DC converter with a load factor of 1% or less.

\*Maximum output of 50 W for up to 1 minute.

# Insulation resistance testing at 25 V to 1000 V and 0.01 M $\Omega$ to 9.99 G $\Omega$

The test voltage can be set to 25 V through 1000 V at a resolution of 1 V. Insulation resistance covers a wide measurement range from  $0.01 \text{ M}\Omega$  to  $9.99 \text{ G}\Omega$ \*.

| Test voltage | Resistance measurement range       |
|--------------|------------------------------------|
| 25V          | 0.03 M $\Omega$ to 500 M $\Omega$  |
| 50V          | 0.05 M $\Omega$ to 1.00 G $\Omega$ |
| 100V         | 0.10 M $\Omega$ to 2.00 G $\Omega$ |
| 125V         | 0.13 M $\Omega$ to 2.50 G $\Omega$ |
| 250V         | 0.25 M $\Omega$ to 5.00 G $\Omega$ |
| 500V         | 0.50 M $\Omega$ to 9.99 G $\Omega$ |
| 1000V        | 1.00 M $\Omega$ to 9.99 G $\Omega$ |

A single unit of the TOS9200/9201 is capable of handling all test voltages required by JIS C 1302 1994 (Insulation Resistor Meter) and fully meets the JIS requirements.

\*At a maximum rated current of 1 mA to 50 nA.

#### **Enhanced measurement accuracy**

The TOS9200/9201 is provided with a digital voltmeter for withstanding voltage testing at an accuracy of  $\pm(1\%$  of reading + 30 V) and another one for insulation resistance testing at an accuracy of  $\pm(1\%$  of reading + 1 V). Measured values are displayed not only during a test, but while a program is being executed. A digital ammeter with an accuracy of  $\pm(3\%$  of reading + 20  $\mu$ A) is also provided for withstanding voltage testing. Kikusui's predecessors had a highest measurement resolution of about 1 mA , with an accuracy of  $\pm5\%$  of the upper cutoff current when it is set to 100 mA. In contrast, the digital ammeter allows the TOS9200/9201 to make measurements at an accuracy of  $\pm(3\%$  of reading + 20  $\mu$ A), even if the upper current is set to 100 mA. The ammeter displays measured values while the program executes, as well as during an AC or DC withstanding voltage test.

| Туре  | Display accuracy                        |
|---|---|
| Voltmeter for withstanding voltage testing  | $\pm$ (1% of reading + 30V)             |
| Ammeter for withstanding voltage testing    | $\pm(3\%$ of reading + $20\mu\text{A})$ |
| Voltmeter for insulation resistance testing | $\pm$ (1% of reading + 1V)              |
| Insulation resistance meter                 | ± (2% of reading)*                      |

<sup>\*</sup>At 1 µA< measured current ≤ 1 mA

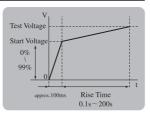

Withstanding Voltage and Insulation Resistance Tester

#### **Diverse functions**

#### Rise-time control function

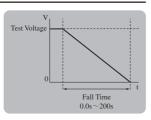

In AC withstanding voltage testing, DC withstanding voltage testing and insulation resistance testing, you can apply a voltage gradually to reach the test voltage, instead of applying the test voltage directly at the start of a test. The voltage increase time can be set to 0.1 s through 99.9 s at a resolution of 0.1 s,

and to 100 s to 200 s at a resolution of 1 s. The start voltage is also adjustable between 0% and 99% at a resolution of 1%.

#### Fall-time control function

In AC withstanding voltage testing, you can gradually decrease the test voltage after a PASS judgment. The voltage fall time is adjustable between 0.0 s and 99.9 s at a resolution of 0.1 s, and between 100 s and 200 s at a resolution of 1 s.

#### Offset cancel function

In AC withstanding voltage tests that require high sensitivity and high voltages, currents flowing into the stray capacity of the test lead wire, jigs, and other components can cause measurement errors. The TOS9200/9201 features a function to cancel these offset currents.

#### Voltage hold function

During measurement, this function allows you to hold the value of the voltage measured at the end of an AC or DC withstanding voltage test, as long as the test results are being displayed. When combined with the rise-time control function, this function enables to observe the insulation breakdown voltage.

# Maximum Leakage current and minimum resistance hold function

By selecting "MIN/MAX Mode" in the measurement mode settings, you can hold the maximum current in withstanding voltage testing and the minimum resistance after the judgment wait time in insulation resistance testing. These values are shown on the tester's display. They can also be read back via interface (GPIB or RS-232C).

#### Output voltage monitoring function

When the output voltage deviates from  $\pm (10\% \text{ of setting} + 50 \text{ V})$ , the monitoring function activates to suspend the test, thus ensuring highly reliable testing.

#### Current detection response speed adjustment function

This function switches current detection response speeds for UPPER judgment by adjusting the integrated time constant of the current detection circuit. Three modes are available for the integrated time constant: SLOW (about 40 ms), MID (about 4 ms) and FAST (about 0.4 ms). SLOW mode is used in normal operations. MID and FAST modes are more effective in detecting a discharge occurring instantaneously or containing a large number of frequency components. They are also useful for withstanding voltage tests of test devices that insulation likely be breakdown, such as small electronic components.

#### Memory function

Up to 100 test conditions used in AC and DC withstanding voltage testing and insulation resistance testing, such as the test voltage, judgment value and test time, can be stored with a specific name. For instance, you can store the name of an applied safety standard and the destination of the product to be tested. If test conditions are preset, operator can recall relevant test conditions simply by entering the memory number. If you previously assigned a special name to each of these test conditions, operator can check recalled test conditions by name. The memory function allows you to recall test conditions not only through the recall operation on the front panel, but also by remote control.

#### Program function

By coordinating test conditions stored in an AC withstanding voltage test, DC withstanding voltage test, and insulation resistance test, operator can sequentially run tests that comprise up to 100 steps. When used together with the earth continuity tester TOS6200, the TOS9200 Series permits continuous tests combining test conditions stored in the TOS6200, as well as on the TOS9200 itself. Sequential tests are possible, for example, on AC withstanding voltage, insulation resistance, DC withstanding voltage, and earth continuity, in order. The TOS9200 Series stores up to 500 steps and 100 programs, which can be recalled through the recall operation on the front panel or by remote control.

#### [Sample program]

| St     | tep 00   | St     | ep 01    | St     | Step 02  |      |
|--------|----------|--------|----------|--------|----------|------|
| Memory | Interval | Memory | Interval | Memory | Interval | ENID |
| ACW01  | 0.2s     | DCW01  | 0.2s     | IR01   | 0.2s     | END  |

At Step 00, Step 01 and Step 02, memory ACW01 (AC withstanding voltage test), DCW (DC withstanding voltage test: TOS9201 only) and IR01 (insulation resistance test) are performed, receptively, in succession at 0.2-second intervals.

Withstanding Voltage and Insulation Resistance Tester

#### **Interfaces**

#### **REMOTE connector & SIGNAL I/O connector**

The REMOTE connector on the front panel is intended exclusively for Kikusui's options (remote control/test probe). It allows start and stop

operations by remote control. The SIGNAL I/O connector on the rear panel permits operator to recall panel memory and program memory contents by remote control, as well as controlling start and stop operations. Seven different signals are output from the SIGNAL I/O connector through the open collector.

#### [SIGNAL I/O]

#### GPIB/RS-232C interface

A GPIB/RS-232C interface is provided as a standard feature to facilitate the remote control of all functions of the TOS9200/9201

except the POWER switch, the KEYLOCK function, and the program execution (AUTO) function.

RS-232C [Baud rate: 9600/19200/38400 bps/TOS6200 interface (AUTO mode only): START/STOP control, test condition settings, reading of TOS6200 measured values, and measurement results]

GPIB [Remote control of all functions except the POWER switch, the KEYLOCK function, and the program execution (AUTO) function/SH1, AH1, T6, TE0, L4, LE0, SR1, RL1, PP0, DC1, DT0, C0, E1]

#### High-voltage scanner TOS9220/TOS9221

TOS9221 Front View (same for TOS9220)

### TOS9221 TOS9220

€

The high-voltage scanner TOS9220/TOS9221 has a function that distributes the test voltage provided by the TOS9200/9201 to multiple test points. Up to four channels can be used for outputs on this scanner. Each channel can be set to one of the three electric potential modes – HIGH, LOW, or OPEN. Operator can conduct AC/DC withstanding voltage and insulation resistance tests on any of the four test points. Furthermore, up to four scanners can be connected to the tester, allowing a maximum of 16 channels. The TOS9200 is equipped with a "contact check function" to check the contact between the output of each channel and a test point. These features ensure highly reliable and labor-saving withstanding voltage and insulation resistance tests for electrical and electronic equipment with multiple test points.

TOS9221 Rear View

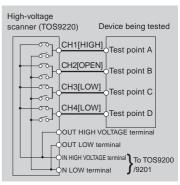

TOS9220 Rear View

#### Operation of the high-voltage scanner

On the TOS9200/TOS9201, you can select an electric potential mode for each channel – HIGH (high voltage side), LOW (low voltage side), and OPEN (open mode). The high-voltage scanner

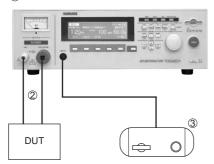

permits AC/DC withstanding voltage or insulation resistance tests on any of the four test points A to D. For instance, you can set CH1 (test point A) to HIGH, CH2 (test point B) to OPEN, and CH3 (test point C) CH4 (test point D) to LOW. To specify these settings, you can use the TOS9200/9201 panel or the GPIB/RS-232C.

#### For Stand alone use...

<sup>\*1</sup> Time limitation on output

The tester's withstanding voltage generator is designed to radiate half as much heat as the rated output, in consideration of the size, weight, cost, and other factors of the tester. It is therefore necessary to use the tester within the ranges specified below. Operations deviating from these ranges may heat the output section excessively, thereby activating the protective circuit. In such a case, suspend the test and wait until the temperature falls to the normal level.

#### [Output limitation in withstanding voltage testing]

| Ambient temperature Upper current |           | Upper current  | Pause Time  | Output time                |  |  |
|-----------------------------------|-----------|----------------|---|----------------------------|--|--|
| AC                                |           | 50< i ≤ 110 mA | At least as long as the output time                     | Maximum of 30 minutes      |  |  |
| t < 40 °C                         | i ≤ 50 mA | Not necessary  | Continuous output possible                              |                            |  |  |
| t ≤ 40 °C DC                      |           | 5< i ≤ 11 mA   | At least as long as the output time                     | Maximum of 1 minute        |  |  |
|                                   |           | i ≤ 5 mA       | At least as long as the judgement wait time (WAIT TIME) | Continuous output possible |  |  |

(Output time = voltage rise time + test time + voltage fall time)

When an AC test voltage is applied to a capacitive load, it is possible that the voltage becomes higher even than that when in the no load state. Furthermore, waveform distortion also may occur if the capacitance of the load is voltage-dependent (such as of ceramics capacitors). When the test voltage is not higher than  $1.5~\rm kV$  and the capacitance is not larger than  $1000~\rm pF$ , such test voltage changes are only of negligible levels. As the output type of the high-voltage generator block of the tester is PWM switching, switching noise and spike noise that the test voltage includes increase when the test voltage is  $500~\rm V$  or less. The lower the test voltage is, the more the waveform distortion increases.

In AC withstanding voltage testing, a current flows into the stray capacity of measurement leadwire and fixtures.

When the optional high-voltage scanner TOS9220/9221 is used, a current of approximately 22  $\mu$ A/kV flows into the stray capacity of each scanner. The table below shows the approximate currents flowing into such stray capacity.

When the LOW terminal is set to GND, a current flowing into the stray capacity is added for measurement purposes to the current flowing into the DUT. In particular, for high-sensitivity, high-accuracy judgement, it is necessary to add the current flowing into the stray capacity to the lower/upper current.

When the LOW terminal is set to FLOAT, the effect of the current flowing into the stray capacity is negligible. If the offset cancel function is used, the current flowing into the stray capacity can be eliminated from the measurement.

| Output voltage   | 1 kV  | 2 kV  | 3 kV  | 4 kV  | 5 kV   |
|--|-------|-------|-------|-------|--------|
| Hanging a 350-mm test lead wire (Typ. value)                       | 2 μΑ  | 4 μΑ  | 6 μΑ  | 8 μΑ  | 10 μΑ  |
| Using the accessory leadwire TL01-TOS (Typ. value)                 | 16 μΑ | 32 μΑ | 48 μΑ | 64 µA | 80 μΑ  |
| High-voltage scanner (Typ. value, not including the test leadwire) | 22 μΑ | 44 µA | 66 µA | 88 μΑ | 110 μΑ |

With the LOW terminal set to FLOAT, current measurement is disabled when the part of the DUT connected to the LOW terminal is grounded, which is extremely danger. Do not ground the DUT. In ordinary operation, set the LOW terminal to GND.

When the LOW terminal is set to FLOAT, current measurement is disabled if the part of the DUT connected to the LOW terminal is grounded, which is extremely danger. Do not ground the DUT. In ordinary operation, set the LOW terminal to GND.

Withstanding Voltage and Insulation Resistance Tester

[Measurement accuracy achieved when the scanner and the TOS9220/9201 tester are connected]

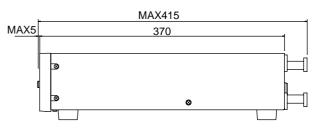

In an AC withstanding voltage test, a current of approx.  $22 \,\mu$ A/kV flows per scanner due to stray capacitance in the scanner in comparison with use of the TOS9220/9201 tester alone. Note that this current may contribute to errors in current measurements conducted by the TOS9220/9201 tester.

# —External dimensional diagrams—

Unit: mm

<sup>\*3</sup> This instrument is a Class I equipment. Be sure to ground the protective conductor terminal of the instrument. The safety of the instrument is not guaranteed unless the instrument is grounded properly.

# Global Standard of the Withstanding Voltage / Insulation / Resistance Testers

#### **TOS8870A**

( (

# Applying to various safety standards Capable to perform the continuous Withstanding Insulation Resistance Testing.

TOS8870A is a combination of a withstanding voltage tester and an insulation resistance tester, and it is capable of performing Withstanding Voltage Test and Insulation Resistance Test in one continuous process. (Choice of setting arrangement: AUTO ACW→IR, AUTO IR→ACW, MANU.ACW, MANU.IR.)

The Tester can provide a maximum output of 5kV and an output capacity of 500VA (AC), and can be used for withstanding voltage test for the electrical equipment and components in compliance with major electrical standards and ordinances. As for the insulation resistance tester, the tester has two ranges of  $500V/1000M\Omega$  and  $1000V/2000M\Omega$ .

- Capable of performing withstanding voltage test and insulation resistance test in one continuous process.
- Withstanding Voltage Tester: Maximum Output AC 5kV/100mA and Output Capacity 500VA
- Insulation resistance in 2 ranges: 500V/ 1000MΩ and 1000V/2000MΩ
- Output characteristics complied with JIS C 1302-1994 for Insulation/Resistance testing
- Voltmeter : JIS class 1, Accuracy : ±1.5% f.s
- GO-NOGO judgment with a window comparator type
- Remote control function
- PASS, FAIL contact signal output
- Equipped with Digital Timer: 0.2sec to 99.9sec/1sec to 999sec
- Downsized approximately 30% in volume (compared to the existing type)

Withstanding Voltage and Insulation Resistance Tester

#### Withstanding Voltage test mode

|                   | Judging method   | Absolute value of leakage current is integrated and compared with preset limit reference value  |  |
|                   | Calibration  | Calibrated with rms value of sine wave, using a pure resistance load.   |  |
|                   | No-load output voltage   | 2.5 kV range Approx. 450 V when set at 100 mA   |  |
|                   | need for detection *4  | 5 kV range Approx. 550 V when set at 100 mA   |  |
| Test time         |  | Timer :0.2 s to 99.9 s (× 0.1 range) ±50 ms   |  |
|                   |  | 1 s to 999 s (× 1 range) ±0.5 s   |  |
| Others            |  | Terminals for monitoring of leakage current   |  |
|                   |  |   |  |

<sup>\*1.</sup> The heat radiation of the output section of the tester is designed to be 1/2 of the rated output, taking the size, weight, cost, etc., into consideration. Therefore, use it within the limitations shown in Table 1. If it is used in excess of these limitations, the temperature of the output section rises excessively and the internal protection circuit may be activated. In this case, cancel the test for a while and wait until the normal temperature is restored.

<sup>\*4.</sup> When making an FAIL judgement test with the output terminals shorted, a certain level of no-load output voltage is needed due to the internal resistance of the output circuit. The voltages shown here are this type of output voltages.

| Table | 1. |  |
|-------|----|--|
|-------|----|--|

| Ambient temperature | Test current I  | Pause time          | Maximum test time        |
|---------------------|-----------------|---------------------|--------------------------|
| t < 40 °C           | 25.5 < I vz 100 | Test time or longer | 30 minutes or less       |
| 1240 0              | I < 25.5        | Not required        | Continuous test possible |
|                     |                 |                     |                          |

#### [Table 2.]

|   | Output voltage                                  | 1 kV  | 2 kV  | 3 kV  | 4 kV  | 5 kV   |
|---|---|-------|-------|-------|-------|--------|
| _ | Test alone (without leadwires)                  | 4 μΑ  | 8 μΑ  | 12 μΑ | 16 μΑ | 20 μΑ  |
| : | When 350mm long leadwires are hung in air       | 6 μΑ  | 12 μΑ | 18 μΑ | 24 μΑ | 30 μΑ  |
| _ | When the accessory leadwire (TL01-TOS) are used | 20 μΑ | 40 μΑ | 60 μΑ | 80 μΑ | 100 μΑ |

#### Test Voltage Waveform

When an AC output voltage is applied to a capacitive load, it is possible that the voltage becomes higher than when in the no-load state due to the capacitance of the load. Moreover, when the capacitance of the load is voltage dependent (typical examples are ceramic capacitors), the voltage waveform may be distorted. When the test voltage is 1.5kV, however, effects caused by a capacitance of 1000pF or less are negligible.

|                            |                                     | 1 s to 999 s ( $\times$ 1 range) $\pm$ 0.5 s   |  |  |
| *1 A+ 25 °C + 10 °C        | ٦.                                  |  |  |  |

<sup>\*1.</sup> At 25 °C  $\pm$  10 °C

The 1st effective measuring range is from 1/1000 to 1/2 of the maximum effective scale value. The 2nd effective measuring range is from the above to the maximum effective scale value.

<sup>\*2.</sup> Crest factor of 1.35 to 1.41, distortion of 3% or less

<sup>\*3.</sup> The current which flows due to stray capacitances of the output circuit and leadwires causes an error. The overall accuracy of judgement is the above-mentioned accuracy of judgement plus a factor caused by this current. Typical values of this type of currents are shown in the Table 2. Note that, when a test is made with a high voltage and high sensitivity, the current which flows through the stray capacitances may become larger than the preset low limit reference value and low limit judgement may become unavailable.

Withstanding Voltage and Insulation Resistance Tester

<sup>\*1.</sup> The input terminal is pulled up to +15V supply voltage by resistor. Opening of the input terminal is equivalent to a high level input.

Loudness of the buzzer is adjustable with a knob in common for the PASS signal and FAIL alarm.

110V / 120V: 25VA or less

220V / 230v / 240V : 45VA or less

# −External dimensional diagrams—

Unit: mm

<sup>\*2.</sup> The rating of the signal contacts is 125VAC, 1A, or 30VDC, 1A.

<sup>\*3</sup> Only on models that have CE marking on the panel. Not applicable to custom order models.

<sup>\*4</sup> This instrument is a Class I equipment. Be sure to ground the protective conductor terminal of the instrument. The safety of the instrument is not guaranteed unless the instrument is grounded properly.

<sup>\*5.</sup> Can be factory-modified to nominal 110V, 120V, 220V, 230V and 240V.

<sup>\*6</sup>. Power consumption of the instrument modified to operate on an AC line voltage other than 100V is as follows.

Withstanding Voltage Tester

# Basic model series with excellent cost performance.

#### TOS5101(AC/DC)

### High-end model of TOS series having AC, DC10kV output Conforming to demands of various component standards testing and margin test

TOS series (TOS5101/5051/5050) are designed exclusively for withstand-voltage testing of electronic equipment and components conforming to various safety standards. The use of a high luminance, large fluorescent display tube for the display enables data including measured values, status and judgment results to be extremely legible. The Pass/fail function employs a window comparator method that enables TOS5101 to make fail judgment of current leakage over the upper reference value and below the lower reference value which can be set on the front panel.

Thus, highly reliable testing can be performed including that for test lead disconnection and defective contact. In addition, in order to prevent erroneous operation and accidents, the TOS5101 is also equipped with a Key Lock function and Interlock function, a high-voltage output terminal having a narrowed insertion port, a large DANGER lamp, and an automatic discharge function (during DC operation) that removes charge from the test piece. These features give the TOS5101 a high degree of safety and reliability.

- Complies with various safety standards
- AC/DC output (0 to 10 kV)
- Large color display
- Digital voltmeter and ammeter
- Digital timer
- Window comparator type employed for Pass / fail judgement.
- Equipped with remote control function
- Various signal outputs
- Automatic discharge function (during DC operation)
- Provided with zero turn-on switch
- Compact size

Withstanding Voltage Tester

#### Available only for UL listed models

# TOS5051(AC/DC) TOS5050(AC)

\*This UL listed product is available for line voltage of AC 120V only.

TOS5051 : outstanding performance on practical use, AC, DC output 5kV

TOS5050: Top selling model for production line etc.

- Complies with various safety standards
- AC/DC output (TOS5051)
- Large color display
- Digital voltmeter and ammeter
- Digital timer
- Window comparator type employed for Pass/fail judgement.
- Equipped with remote control function
- Various signal outputs
- Automatic discharge function (TOS5051: during DC operation)
- Provided with zero turn-on switch

#### TOS5030(AC)

\*This UL listed product is available for line voltage of AC 120V only.

# Reliable function on practicability and safety equipment enable it to be used easily for inspections of devices and testing of electronic components.

The Model TOS5030 is an AC withstanding voltage tester having an AC output of 3 kV and 10 mA. Despite being an economy model, the TOS5030 is equipped with a zero turn-on switch, remote control function for start and stop operations and a FAIL signal output function.

- Compact size, light weight(approx. 4.8kg)
- Economy model for simplified test
- Provided with zero turn-on switch
- Provided with remote control terminal
- Featuring safety high voltage output terminal Large "DANGER" warning lamp

<sup>\*</sup>TOS5030 is for simplified test and does not comply with various safety standards.

Withstanding Voltage Tester

#### TOS5051/5050

\*SIGNAL I/O connector is not available for Model TOS5030

Withstanding Voltage Tester

# Supports best-selling model's performance while featuring RS-232C as standard interface.

# TOS5051A(AC/DC) TOS5050A(AC)

#### Capable to record and storage of the test data

The TOS5000A series offers testers specifically designed to conduct withstanding voltage testing on electronic devices and components in accordance with the relevant safety standards. Two models are available - TOS5051A with 5 kV AC/DC output and TOS5050A with 5 kV AC output. While inheriting the basic performance of our best-selling TOS5000 series testers, TOS5000A has an additional feature - RS-232C interface - that comes standard with the tester. Because the tester can be connected directly to a PC and a serial printer, test data can be recorded and saved with ease, leading to further enhancement in quality control.

- Complies with various safety standards
- AC/DC output (TOS5051A)
- Large color display
- Digital voltmeter and ammeter
- Digital timer
- Window comparator type employed for Pass/fail judgement.
- Equipped with remote control function
- Various signal outputs
- Automatic discharge function (TOS5051A: during DC operation)
- Provided with zero turn-on switch
- Equipped with RS-232C as standard
- Data aquisition software (SD004-TOS5000A/Option)

# **SD004-TOS5000A**

Data Acquisition for TOS5051A/5050A

# Providing an Easy Way to Collect, Manage, and Save Test Results

#### **Highly Reliable Quality Control Can Be Achieved!**

SD004-TOS5000A is a software product that lets you collect and manage test results generated by our TOS5000A Series withstanding voltage testers. Also, SD004-TOS5000A allows you to save, search, and print data with ease. What's more, you can execute or stop the test through a simple operation using a PC.

#### **Features**

- Test mode: Execution/stop function and automatic serial number incrementing function
- Search mode:Data item rearrangement and ascending/descending order function, search function ("sounds-like" search supported), print function (layout change supported), and text and HTML file output function.

#### **Operating Environment**

Pentium III or later, Windows XP/Windows 2000/Windows Me, CD-ROM drive, mouse, display supporting 800 x 600 resolution, 128 MB or more of memory (recommended), 50 MB or more of free space in hard disk drive (for installation) plus sufficient disk capacity to store necessary files, and RS-232C (data rate of 9600 bps; use an RS-232C cross cable for connection.)

# **Equipped with Rise Time Control Function**

**TO5052** 

( (

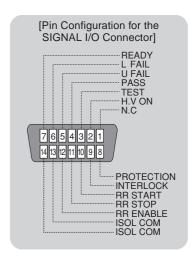

### Rise Time Control function is enable to comply to the Standard requirement for those degradation, destructive testing of sensitive materials

TOS5052 is a special tester designed for withstand-voltage testing of electronic equipment and components conforming to various official safety standards. In addition to having an output of 5 kV AC at 100 mA, this model permits output voltage presetting, selection of output frequency (50 or 60 Hz), and rise-time control to control time for voltage to reach a preset level.

The display uses a large, high-brightness, color fluorescent tube for clear display of numbers, operation status, results, and other information.

For fast and accurate testing, the TOS5052 permits dual-axis operation of the test voltage range selector switch and voltage setting knob, and separate up-down keys for determination current and timer settings. Easier to use than ever before, the TOS5052 also incorporates various safety and security features, including key lock, interlock, high-voltage output terminals limiting the number of insertion holes, and large "DANGER" warning lamps. These features make using the TOS5052 safe and reliable.

- Complies with various standards
- Rise-time control function
- High-output test voltage
- Acceptance determination by the window comparator method

- \*1: Maximum testing time is 30 minutes. However, it may limit the continuous duration (time) of output by upper current limit and the environmental temperature.
- \*2: Only on models that have CE marking on the panel. Not applicable to custom order models.
- \*3: This instrument is a Class I equipment. Be sure to ground the protective conductor terminal of the instrument. The safety of the instrument is not guaranteed unless the instrument is grounded properly.

#### **External dimensional diagrams**

# High cost performance, compact size with full features of **Insulation Resistance Tester**

#### **TO7200**

#### Testing voltage range -25 to -1,000V, Resistance measurement range 0.01M $\Omega$ to 5,000M $\Omega$

The TOS7200 is an insulation resistance tester available for a wide range of various electric and electronic components, as well as electric and electronic equipment. Output voltage can be optionally set in the range of 25 to 1000 V (negative polarity) with a resolution of 1 V. As it is fitted with a window comparator and timer function, the tester is capable of efficiently conducting insulation resistance tests based on various safety standards. In addition, this product is equipped with panel memory as standard feature, which can be recalled by remote control, SIGNAL I/O connector, and the RS-232C interface for easy automatic testing system construction.

- Provided with the discharge function
- Equipped with the window comparator
- Hold function (which holds the measured resistance at the end of testing while PASS judgment is being output)
- Provided with the timer function
- Rear output terminals
- Measured-value monitoring terminals
- Equipped with the panel memory (enabling 10 different settings to be stored)
- Equipped with the SIGNAL I/O connector and remote control terminal
- Has the RS-232C interface as standard

Conforms to the requirements of the following directive and standard.

EMC Directive 89/336/EEC

EN61326

EN61000-3-2

EN61000-3-3

Under following conditions

- 1. Used HV test leadwires TL08-TOS which is supplied.
- 2. No discharge occurs at outside of the tester.
- 3. Used the shielded cable which length is less than three meters when the SIGNAL I/O is used.

#### Safety\*1, 2

Conforms to the requirements of the following directive and standard.

Low Voltage Directive 73/23/EEC

EN61010-1

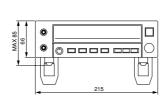

Class I

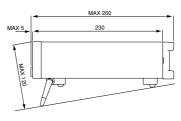

Pollution degree 2

**Earth Continuity Teste** 

# Supports UL60950-1

# **New Standard for Information Technology Equipment (ITE)**

TOS6210 GPIB R8-232C

# **UL60950-1-Compliant 40A/60A Tests are possible!** While inheriting the basic performance and functions of its

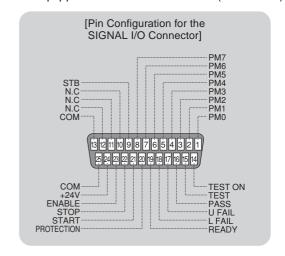

predecessor (TOS6200), such as a constant current driving system that provides current waveforms with little skew and high measurement accuracy, the TOS6210 tester extends the maximum test current from 30 A to 60 A, which is demanded by the new standard. In addition, the tester also lets you judge the acceptability of the device under test based on the drop in voltage, as required in the standard. What's more, you can preset test conditions of up to 20 different types of safety standards, such as those for information technology equipment, home appliances, medical devices, and measuring instruments, in the memory on the main unit's panel. A simple memory call operation allows you to set up a protective earthling or protective bonding continuity test as stipulated in UL60950-1 and other relevant specifications including IEC and JIS standards.

The tester also features a set of functions that meet the specific needs of testing personnel, such as an offset cancellation function and a memo function that allows you to input calibration dates, production numbers, and other test-related information and read the input information later via the GPIB or RS-232C interface.

- Test current value: 6 to 60 A AC / Resistance value: 0.001 to 0.600Ω
- Voltage drop-based judgment function

DRIVERS

- Offset cancelling function
- Stores 100 test conditions in memory
- Incorporates test conditions into program
- Contact Check function
- Equipped with standard GPIB and RS-232C interfaces
- Equipped with standard test lead (TL12-TOS)

#### **Earth Continuity Tester**

| Output block                     |                         |   |  |  |

| Calibration                      |                         | Calibration is performed with the rms value of the sine wave, using a pure resistance load.   |  |  |
| LED                              | PASS                    | Lights for approximately 0.2 sec when the measured value has been judged as PASS.   |  |  |
|                                  |                         | It is lit continuously when the PASS holding time is set to HOLD.   |  |  |
|                                  | UPPER FAIL              | Lights if a resistance or voltage value equal to or greater than the upper reference value is detected and judged FAIL.                                 |  |  |
|                                  | LOWER FAIL              | Lights if a resistance or voltage value equal to or greater than the upper reference value is detected and judged FAIL.                                 |  |  |
| Buzzer                           | •                       | •The buzzer sounds for the pass holding time has been set if the measured value has been judged as PASS.  |  |  |
|                                  |                         | •The buzzer sounds continuously under the following condition:  |  |  |
|                                  |                         | The measured value has been judged as PASS when the PASS holding time is set to HOLD.   |  |  |
|                                  |                         | The measured value has been judged as UPPER FAIL.   |  |  |
|                                  |                         | The measured value has been judged as LOWER FAIL.   |  |  |
|                                  |                         | •The buzzer volume for FAIL or PASS judgment are adjustable.  |  |  |
|                                  |                         | Note that it cannot be adjusted individually since setting is shared with the setting for PASS.   |  |  |
|                                  |                         |   |  |  |
| *1: Time limitation              | with respect to output  | *3: Resistance value-based and sampled voltage value-based judgments cannot be  |  |  |

#### \*1: Time limitation with respect to output

The heat radiation capacity at the output block of the tester is designed to be one-third of the rated output, accounting for size, weight, cost, and other factors. Always use the tester within the limitation values given below. Use of the tester beyond these limits will cause the temperature of the output block to rise excessively, potentially tripping the internal protection circuit. In this case, suspend testing for approximately 30 minutes, then press the STOP switch. When temperatures fall to normal levels, the tester will revert to ready status.

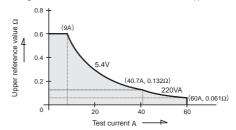

| Output time limitation   |             |  |                            |  |  |

#### \*2: About ohmmeter's response time

A resistance value is instantaneously obtained, calculated using the measured voltage and current values. The response time of the ohmmeter complies with the response times of the voltmeter and ammeter.

- \*3: Resistance value-based and sampled voltage value-based judgments cannot be simultaneously conducted.
- \*4: Limited by the maximum rated output and the output terminal voltage. The tester can be used within the range shown below.

Allowable range in which to determine the test current value and upper reference value

| Time                      |                         |  |
|---------------------------|-------------------------|--|
| Test time Setting range   |                         | 0.3 to 999 s Timer ON/OFF function is available.   |
|                           | Accuracy                | $\pm$ (100ppm of setting + 20ms)                   |

**Earth Continuity Teste** 

# Pursuing to maximize an easy operation, stylish design of Earth Continuity Tester

#### **TOS6200**

# Adopting the constant current method to apply Automated testing system

# Perfect feature for the Production line which requires reduced tact time

The TOS6200 tester is designed to perform the earth continuity tests required for class-I devices by safety standards such as IEC, EN, VDE, BS, UL, JIS, and the Electrical Appliance and Material Safety Low (Japan).

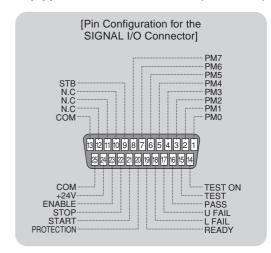

Equipped with a new high-efficiency power supply, it is compact and lightweight, about half the size and weight of our conventional products, while achieving a large output of 150 VA.

Use of the constant current method eliminates the need to reset test currents even in the face of fluctuating resistance values for the device being tested. The test duration can also be set from 0.3 s, making the tester suitable for production line testing, which requires reduced cycle time.

This tester is also designed for ease of use, featuring a large, easy-to-read display, memory capacity for storage of 100 types of test conditions, and incorporation of test conditions into programs to enable automatic testing. Standard GPIB and RS-232C interfaces allow the user to use PCs or other devices to control test conditions such as test current, resistance value for judgement, and test duration, and enables read-back of measured values and test results.

The tester is also provided with test leads as standard and provides high cost effectiveness.

- Test current value: 3 to 30 A AC / Resistance value: 0.001 to 1.200Ω
- Offset cancelling function
- Stores 100 test conditions in memory
- Incorporates test conditions into program
- Contact Check function
- Equipped with standard GPIB and RS-232C interfaces
- Equipped with standard test lead (TL11-TOS)

#### \*1: Time limitation with respect to output

The heat radiation capacity at the output block of the tester is designed to be one-third of the rated output, accounting for size, weight, cost, and other factors. Always use the tester within the limitation values given below. Use of the tester beyond these limits will cause the temperature of the output block to rise excessively, potentially tripping the internal protection circuit. In this case, suspend testing for approximately 30 minutes, then press the STOP switch. When temperatures fall to normal levels, the tester will revert to ready status.

| Output time limitation |             |  |  |  |  |
|------------------------|-------------|--|--|--|--|
|                        |             |  | Maximum allowable continuous test time |  |  |
| t ≤ 40°                | 15 < I ≤ 30 | Equal to or greater than the test time | ≤ 30 minutes                           |  |  |
|                        | I ≤ 15      | Not required                           | Continuous output possible             |  |  |

#### \*2: About ohmmeter's response time

A resistance value is instantaneously obtained, calculated using the measured voltage and current values. The response time of the ohmmeter complies with the response times of the voltmeter and ammeter.

| Power requirement       |                    |  |
|-------------------------|--------------------|--|
| Allowable voltage range |                    | 100 V model : 85 to 132 V AC                       |
|                         |                    | 100 V/200 V model : 85 to 132 V AC/170 to 250 V AC |
| Power consumption       | At no load (READY) | 100 V model : 70 VA or less                        |

#### Electromagnetic compatibility (EMC) (\*3,4)

Conforms to the requirements of the following directive and standard.

EMC Directive 89/336/EEC

EN61326

EN61000-3-2

EN61000-3-3

Under following conditions

- 1. Used test leadwire (TL11-TOS) which is supplied.
- 2. Used the shielded cable which length is less than three meters when the SIGNAL I/O is used.

#### Safety (\*3)

Conforms to the requirements of the following directive and standard.

Low Voltage Directive 73/23/EEC

EN61010-1

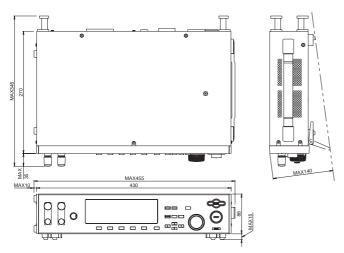

Class I

Pollution degree 2

| Physical dimensions (max) | 430(455)W X 88(140)H X 270(345)Dmm                                       |
|---------------------------|--|

#### **High-Voltage Digital Voltmeter**

#### ■149-10A

- Measurement of high voltages (AC/DC) of up to 10 kV maximum.
- Large 41/2 digit LED display
- High measuring accuracy and input resistance
- Light weight of only 3.2 kg
- Compact design
- Excellent ease of maintenance

| Specifications      |  |
|---------------------|--|
| Operating System    | Double integration system (sampling              |
|                     | cycle: 3 times/sec)                              |
| DC Voltage          | Measuring range: 0.500kV to                      |

#### **UL Resistance Load**

#### ■RL01-TOS

This device is described in section 125, paragraph 2-1B1 of UL1492. The RL01-TOS is a variable load resistor for checking the output voltage of withstanding voltage testers used in dielectric strength testing on production lines. (Complies with UL regulations including UL1270, UL1409 and UL1410.)

| Specifications           |   |
|--------------------------|---|
| Resistors:               | 120, 159, 210, 279, 369, 489, 648, 858, |
|                          | 1,137, 1,500, 1,989 and 2,148 kW        |
| Resistance Accuracy      | +1%,-0% of nominal value when set       |
|                          | to 120 kW, ±1% of nominal value when    |
|                          | set to other values                     |
| Maximum OperatingVoltage | 1300 V (continuous rating)              |
| Maximum Overload Voltage | 1400 V for 5 seconds (application may   |
|                          | not be repeated within 1 minute)        |
| Dimensions (MAX)         | 200W × 100H × 260D mm                   |
|                          | (210W × 120H × 295D mm)                 |
| Weight                   | approx. 2.6 kg                          |
